2022 Myanmar Factsheet
The Safeguarding Health in Conflict Coalition (SHCC) identified at least 271 incidents of violence against or obstruction of health care in Myanmar in 2022. In these incidents, 112 health workers were arrested and 27 were killed, undermining health care providers’ ability to maintain safe staffing levels to effectively meet patient needs. In addition, health facilities were damaged or destroyed on at least 46 occasions and raided 32 times, impacting the population’s access to health care. This factsheet is based on the dataset 2022 SHCC Health Care Myanmar Data, which is available for download on HDX.

Overview
- There was a shift in the location of most incidents in 2022 from Mandalay and Yangon cities in 2021 to Rakhine state and Sagaing region, reflecting the shift from violence during political demonstrations in big cities in 2021 to areas under control of the PDF or allied EAOs in 2022.
- The regime’s targeting of health workers active in the CDM continued in 2022. Many of the 325 who were arrested in 2021 remained in prison.
- SAC forces continued to shrink the humanitarian space by making it increasingly difficult for health workers, humanitarian organisations, and LNGOs to access patients and communities in conflict-affected areas.
- SAC forces employed air strikes against health facilities in northern Sagaing and Kayah, while shelling and missiles mainly affected health care providers in Kayin. IED use was mostly concentrated in the southern Sagaing and Mandalay districts in central Myanmar. Read more
