2 52 incidents were recorded by the WHO SSA without specifying the location and no additional source could be identified to determine the location of the reported incident.
3 We are aware of other sources reporting higher health worker killings. 127 is based on the number of health workers killed where location and date has been identified as we do not report aggregate numbers but compile our numbers based on individually reported cases. We continue to work on collating a complete list from information that has been provided in different formats such as names or professions of health workers who were killed. This cross-checking process is complex to avoid double counting the same individuals based on the fact that different victim information was provided by different information providers. The total number of health workers killed is believed to be higher than the current verified number.
